Detailed Action

In response to the correspondence filed on 03/31/2004 claims 1- 7 are pending. This office action is made Non-Final.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Lousing-Nont (US 4,358,279).

[Claim 1]: Regarding claim 1 Lousing-Nont discloses a template (e.g. score sheet) for evaluating and scoring designated pairs of responses, said template comprising a series of paired locations thereon, a first set of said locations being linked by indicia on said template, a pathway leading from said first set of locations to at least a second set of locations, said pathway being shown by said indicia for leading a user from said first set to said second set of locations (See Col.4, 19-24), each of said locations allowing for viewing through said template.

[Claim 2]: regarding claim 2, Lousing-Nont discloses a template as defined in claim 1 wherein said indicia comprises a series of lines connecting the sets together (See Fig.4, and Col.4, 19-24).

[Claim 4]: Lousing-Nont discloses a template wherein each pair of locations is identified by a common geometric shape (e.g. circles and squares) (See Fig. 5, and abstract).

[Claim 5]: Lousing-Nont further discloses a template wherein each pair of locations is identified by an identical geometric shape, and the next consecutive pair in said series is identified by a different geometrical shape (See Col.3, 24-33).

[Claim 6]: with respect to claim 6, Lopusing-Nont discloses a method for evaluating designated pairs of responses to a series of questions, said method including the steps of positioning a template upon an answer sheet, and following a pathway for identifying pairs of answers to a plurality of paired questions, and evaluating said pairs of answers to said paired questions (See Col.4, 19-30, 38-41).

[Claim 7]: Regarding claim 7, Lousing-Nont discloses a method as defined in claim 6 wherein said pathway is comprised of a continuous line (See Fig.4).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lousing-Nont.

Lousing-Nont fails to specifically disclose a series of broken lines that connect the distinguished pairs together. However, the applicant has not disclosed that including the dashed lines to connect the pairs provides any advantage or solves any specific problem. Moreover, the invention is expected to work equally well without the dashed lines. Therefore, it would have been obvious to modify Lousing-Nont's invention as

specified in claim 3, because such invention is considered a mere design choice which fails to patentably distinguish over the prior art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Banafsheh Hadizonooz whose telephone number is 571-272-1242. The examiner can normally be reached on 8:00-5:00.
